Power drill and hook not included

SlatWall MX Strip™
P/N: HSS196
HSS148

Installation Instructions

- Fasten onto wall using slat wall channels for mounting
- Pre-drill $5/32"$ holes into **SlatWall MX™ Strip** channels thru the aluminum channel inserts to locate panel onto structural wall components (ie wall studs) wherever possible. **IMPORTANT! Screws must be installed thru the aluminum channel inserts to ensure highest load capacity strength. Failure to do so may cause the unit to break.**
- Use as many wall studs as possible
- It is important to also position screws at either end of the SlatWall MX™ Strip . If there is no stud at these locations use appropriate wall anchors.
- Pre-drilled holes should be located every 12"-16"
- Depending on the exact nature of your screws, countersinking all pre-drilled holes may be necessary so screw heads do not protrude into channel. Screw heads protruding into channel may inhibit movement of hooks.
- Use a level to ensure level horizontal mounting
- Using proper size fastener, screw panel into wall
- Do not over tighten screws
- Due to the manufacturing process, a slight bow in the SlatWall MX™ Strip is normal. This bow is naturally removed by the installation process.

CAUTION!

Keep heavy loads at least 3 inches away from either ends of SlatWall MX™ Strip. Hanging heavy loads close to the ends can cause the product to break. Also keep any heavy loads at least 6 inches apart.
